

# SYSTEM ADMINISTRATOR APPRECIATION DAY 2018

Presenting the Sophos Naked Security Dodecahedron of Code

Cut out and keep your very own D12 to ensure a truly random choice of programming language for your next project.

Never, ever get lumbered with Perl, Python or PHP again.

Say *No* to Node, *See you later* to C, and *You're joking* to Java.

Print onto stiff paper or light card. We used the fancy colour printer in marketing, but don't tell anyone.

Cut carefully around outline. Score along dashed lines so it's easier to fold into shape.

Form into a 12-sided ball and glue tabs neatly under each adjacent side. The last tab is a bit of a hassle, so take your time.

Allow glue to set. Then roll your die and find out what language you're coding in next.
